

SOME HUNCHES ON HEALTH

(OUR HEALTH DEPARTMENT)
By Dock Soper

Never carelessly eat pounded glass in hopes of helping your lights, because it is very apt to produce a sincere pain in your sash region.

A surgeon should never be called out. They have a legal right to cut you but there is nothing in their license that permits their shooting you.

Hook worms, Alphonso, are germs produced as a result of long search and research by Germaniacs. They are so-called because of their tendency to hook one's feet to the ground when duty calls. They may be caused to loosen up, however, by the ringing of a dinner bell.

Never stand in a draught or on a railroad track too long.

A "cash system" has nothing to do with your physical condition, Oscar, though the gnawing feeling you speak of as not answering readily to faith treatment may be on account of the lack of Thoncitis. Kleptomaniacs are seldom troubled this way, which leads us to make the profound statement that you should either be one or have the other.

Gluton and glutton are not the same thing—see page 1987 J. D. Rockefeller cash book, grocery account. Gluton is from glue, sticky, stuck, glued, evidenced on page mentioned by cash balance over amount paid for groceries.

To cure falling hair, wrap the head securely in a sack.

First aid to the injured: First ascertain whether the injured person is hurt or not and when this is ascertained the person should be moved if he is apt to be injured again in the same place. If a physician is handy he could be called on to assist. If it is a broken leg, tie both arms behind his back in order that he cannot get away while being searched for other injuries or personal effects. In case he should struggle while you are wiring the break together with bailing wire, and break his other leg, it might be well to hitch the uninjured member to a post, which can always be found handy, then proceed as indicated on the package.

No one should eat before or after meals, and only occasionally during meals. Chew the food well, for at present prices it needs to be cut up well into small pieces. When it is once swallowed it is gone.

Hunches On Health from time to time are invaluable, since many persons have been sick without knowing it until they discover the truth in hints of this kind, and far be it from us to permit a reader to go along not knowing that he has been fatally ill with some dreaded disease. From week to week we will endeavor to help out some.

When a medicine must be given to young children it should be pleasant to take. Chamberlain's Cough Remedy is made from loaf sugar, and the roots used in its preparation give it a flavor similar to maple syrup, making it pleasant to take. It has no superior for colds, croup and whooping cough. For sale by all dealers.

Attention, Co. II!

Drill every Monday night, from 8 to 9 o'clock. Every member is expected to be present.

Wm. A. Campbell,
Capt. Com.

DUE TO LAWS OF RHYTHM

Scientist Was Willing to Concede Something to Author of "The Vision of Sin."

Thomas Nelson Page contrasted the literary and the scientific temperaments. "But a letter will best bring out my point," said the famous author. "You've heard, of course, of Tennyson's poem, 'The Vision of Sin.' Well, an eminent mathematician wrote to Tennyson, on the appearance of his poem, a letter that ran like this: 'Dear Sir: I find in a recent poem of yours, entitled "The Vision of Sin," the following unwarranted statement, "Every moment dies a man, and every moment one is born." I need hardly point out that this calculation, if correct, would tend to keep the sum total of the world's population in a state of perpetual equipoise, whereas it is an established fact that the said population is constantly on the increase. I would, therefore, suggest that in the next edition of this poem the erroneous calculation to which I refer should be corrected, as follows: "Every moment dies a man, and one and a sixteenth is born." I may add that the exact figures are 1.617, but something must, of course, be conceded to the laws of rhythm.'"

EXPENSIVE

"I want to marry your daughter the minute I can support her."
"I guess that's about as long as you could do it."

AERIAL TRANSPORTATION.

It is said that the French colonial army intends to establish aerial transportation across the desert of Sahara to link the French north African possessions with those of the Congo.

One critic remarks that in alighting sand is likely to work itself into the motor and that unless the aeroplane flies at a height of over 1,000 feet sand storms may play havoc with the machinery. The French are likewise considering carrying mail by aeroplane in Madagascar between Antananarivo, Ambositra and Fianarantsoa. The distance each way is 250 miles and it takes a week to deliver the mail at Fianarantsoa. An aeroplane could cover the distance in six hours.—Scientific American.

THE TROUBLE.

"So she doesn't return your affection, eh? Well, I shouldn't get mad about that. What's the use of bothering about a girl?" said Watkins.

"I don't mind her not returning my affection," said Dobbleigh, "but, confound it, she won't return my diamond ring, either!"—Harper's Weekly.

WOMAN LAW STUDENT.

Miss Nellie J. Ryder of Bangor, Me., is the second woman to enter the University of Maine law school to take the regular course. She expects to graduate after the three years' course as LL. D. One would rather expect the professional woman to predominate in the east, but she seems to be in greater numbers in the middle west.
